jobexecutor.com

EFFECTIVE JOB SCHEDULING IS KEY TO THE SUCCESS OF IT WITHIN ANY BUSINESS. HISTORICALLY, ORGANISATIONS RAN BATCH JOBS OVERNIGHT BY SHUTTING DOWN ONLINE SYSTEMS OUTSIDE OF BUSINESS HOURS. IN TODAY'S 24/7 ECONOMY HOWEVER, TAKING SYSTEMS OFFLINE FOR EVEN A FEW MINUTES IS UNTHINKABLE FOR ANY BUSINESS – AFFECTING NOT ONLY THEIR ABILITY TO COMPETE, BUT ULTIMATELY THEIR BOTTOM LINE.

This has resulted in job scheduling evolving into Workload Automation; an event driven solution which integrates processes between applications in real-time. Despite the multiple business benefits on offer however, many organisations are yet to implement a consolidated Workload Automation platform, with initial hardware and software investment, ongoing operational costs and long term ROI being the prohibitive factors most commonly cited. As a result many businesses still have multiple job schedulers in place, and must deal with the problems this complexity brings on a daily basis.

WHAT IS JOBEXECUTOR?

JobExecutor.com addresses the challenge by providing a competitively priced, subscription based, enterprise-class Workload Automation service in the Cloud. Powered by IBM's Workload Automation software (formerly Tivoli Workload Scheduler) – proven technology used successfully by thousands of enterprises Worldwide – JobExecutor's Software-as-a-Service (SaaS) model allows all organisations to invest in Workload Automation by eliminating the need for initial hardware investment and ongoing maintenance costs, and introducing predictable, transparent monthly costs.
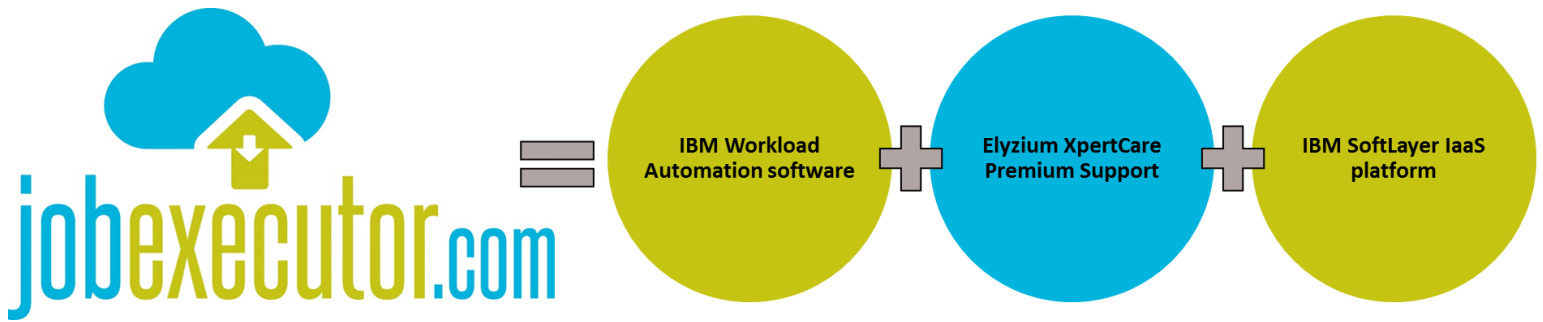

The JobExecutor service provides a complete Workload Automation solution, which not only includes all software and infrastructure hardware costs as part of the monthly subscription, but additionally premium XpertCare support from the World's only IBM "Gold" accredited Business Partner for Workload Automation, Elyzium.

AT A GLANCE

JobExecutor.com provides organisations with a fully supported, enterprise standard, Cloud-based Workload Automation service for a low, predictable monthly cost, and without the need for upfront investment in expensive software and hardware infrastructure.

"With JobExecutor.com organisations can deploy Workload Automation in minutes, and without breaking the bank."

JobExecutor is available in two levels of service – a standard monitoring service, or an elite, fully managed service – to suit the budget of all organisations, and comprises the following elements:

jobexecutor.com = **IBM Workload Automation software** + **Elyzium XpertCare Premium Support** + **IBM SoftLayer IaaS platform**

FEATURES

- **The service is underpinned by proven, Industrial strength business automation technology from IBM – Workload Automation - which includes:**

  o User initiated reporting

  o Supply chain integration

  o Automated data and file transfer

  o Application data integration

- **Provides the security of an onsite implementation by retaining data on customer servers, with automation rules maintained in the Cloud**

- **Zero touch implementation for end-users – everything is deployed and maintained in datacentres**

- **99.9% service availability**

- **Fixed pricing is based on the number of jobs run, rather than PVU based**

- **Up and running within minutes, rather than a typical implementation cycle of 3-6 months for an on premise solution**

- **Delivered by Elyzium, the UK's leading workload automation specialist**

- **Fully supported by XpertCare from Elyzium – the World's most accredited Workload Automation deployment specialist**

- **Fast, simple migration of legacy job schedulers to Workload Automation via Elyzium's unique Workload Migrator tool (*available as an add-on to the contract)**

BENEFITS

- **Transparent monthly subscription pricing model eliminates or reduces both capital and operational expenditure when compared with an on premise solution:**

  o No upfront investment required for software licensing and hardware

  o Removes in-house resource costs associated with managing a workload automation solution

  o No additional upgrade or ongoing maintenance costs

  o No implementation requirements

- **Faster time to value - typically by up to 40% - than a traditional on premise solution**

- **Clients gain an enterprise level solution at a fraction of the traditional cost and at very low risk to the business**

- **Easily scales with business requirements since pricing is simply based on the number of jobs being run**

- **Accelerates the introduction of new business applications requiring workload automation**

- **Simplified management and less reliance on IT leads to greater control for business users**
