

IBM TIVOLI WORKLOAD SCHEDULER™ INTEGRATION WITH ORACLE RETAIL™

Through an integrated suite of business applications, server and storage solutions, Oracle Retail delivers a complete solution which allows retailers to align corporate objectives with deployment strategies, optimising all areas of the business, and helping to deliver superior customer experience whilst driving profitable growth.

The individual modules within Oracle Retail must however be integrated through batch scheduling – a manual development and implementation process which can take months, thereby delaying time-to-market and time-to-value of the solution.

Integration with IBM Tivoli Workload Scheduler

IBM Tivoli Workload Scheduler is a leading enterprise software tool that automates, monitors and controls workflow throughout the enterprise IT infrastructure. With the ability to manage hundreds of thousands of workloads a day - from a single point of control - it enables organisations to better align IT with business objectives to improve performance and reduce costs.

By developing a Tivoli Workload Scheduler (TWS) integration module for Oracle Retail, Elyzium is able to provide users with a faster, and more straightforward solution to deploy the batch scheduling element required for each module of the Oracle Retail solution. Through exploitation of key features – such as multithreading – Elyzium’s TWS Integration module delivers significant reductions in development, implementation, errors and time-to-fix, whilst automating business processes, and simplifying integration with other business applications outside of the Oracle Retail suite.

With Elyzium’s TWS for Oracle Retail integration module, organisations can optimise their Retail solution quickly and efficiently, increase visibility and control, free-up staff for business innovation, and ultimately reduce the business risk often associated with a significant new software deployment.

Features

Elyzium's IBM Tivoli Workload Scheduler integration module enables Oracle Retail users to:

- Benefit from a "single pane of glass" solution to initiate, monitor, control and manage Oracle Retail processes
- Manage and complete processing quickly and accurately, by exploiting Oracle Retail's multi-threading functionality
- Automate restart and recovery processes safely, applying them to each and every individual thread as required
- Accelerate diagnosis of issues and the associated time-to-fix by providing key data from the Oracle Retail error logs
- Easily execute updates and changes as the project evolves or requirements change
- Access pre-built batch processes straight "out-of-the-box"

Powered by Elyzium

Elyzium is the only IBM "Gold" deployment accredited partner for Tivoli Workload Scheduler, and a Software-as-a-Service Solution Provider for Workload Automation Worldwide. Specialising in the provision, deployment, consultancy and support of on premise and Cloud-based Workload Automation solutions, our innovative offerings provide clients with more cost-effective, transparent and efficient Workload Automation environments.

Benefits

- ✓ Reduces development and deployment time for batch scheduling to weeks rather than months
- ✓ Allows best practice management of key Oracle Retail functionality, such as multithreading
- ✓ Automates batch creation with full or customised schedules without the need for Tivoli Workload Scheduler expertise
- ✓ Significantly improves the time-to-market and time-to-value of Retail deployments, paying for itself during implementation alone
- ✓ Reduces the business risk associated with a custom solution that has been developed in house
- ✓ Improves visibility and control
- ✓ Enables fast and easy integration with other business applications
