

Notification Service Demo

XNS is Elyzium's advanced, interactive, and Cloud-based notification solution for use with Tivoli Workload Scheduler and other Tivoli management software. There is now a demo available so you can see how it works:

Just dial the following phone number +44 (0)1706 304019 from any device capable of receiving SMS, you will then be presented with the following three options:

1. TWS SMS Demo

Just confirm that the device from which you are calling is capable of receiving SMS messages and a sample SMS will be sent to your device.

2. TWS Voice Demo

You will be asked to enter any four digit number (e.g.1234) followed by the hash key (#)

The message will start with the example summary message: "Backup Job has failed on Workstation PROD ERP".

You will then be presented with three options:

1. Press 1 to re-start job
2. Press 2 to release dependent jobs
3. Press 3 to cancel the job

Once an option has been input then the user is thanked for hearing the demo.

3. Hear the Welcome message and options again

The voice used in the welcome message is a UK English female voice, with future options to hear the TWS Demo's in French, German and Italian.
